

Homebuyer Notification Regarding Use of Recycled Water

The home you are buying uses a recycled water system for all landscape irrigation. More than 3,500 homes in the El Dorado Irrigation District's (EID) service area use recycled water for landscape irrigation. It is one way to help conserve the region's water supply. Every drop of recycled water used is a drop in the drinking water savings account. EID's recycled water meets all state and federal requirements for health and safety.

To make sure that you use recycled water properly, please become familiar with and follow the rules below.

1. Unless not required by your development's Engineer's Report, you must attend an EID recycled water orientation within 90 days from close of escrow on your home, before you begin any design or construction of your backyard
2. You must use the recycled water system for front and backyard irrigation; your drinking water is not for landscape irrigation.
3. Do not use your recycled water system for any indoor purpose or for water features such as swimming pools, spas, fountains, fish ponds, etc.
4. Do not connect your recycled and potable water lines together.
5. EID will supervise the installation of your recycled water irrigation system. A landscape irrigation plan must be submitted to the district before any construction may begin. The irrigation system must comply with EID's rules and regulations. Those rules are detailed in two documents the "Recycled Water On-Site Design & Construction Standards for Residential Dual Plumbed Homes" and the "On-Site Recycled Water Notes and Details for Residential Sites". These documents are available at the developer's sales office or on the EID recycled water website.
6. You must submit new irrigation plans to EID before you make any major modifications or design changes to your landscape irrigation system. The plans must be reviewed, approved, and inspected by EID **before** you can use the new system. The landscape designers and contractors you employ for this work must be pre-approved by EID before construction begins. A list of pre-approved contractors is available on EID's recycled water website. You may replace and maintain your system components without submitting a new irrigation plan.
7. Your property has a backflow-prevention device located adjacent to your drinking water meter. This device will be inspected annually by an EID certified tester.
8. Inform all family members, visitors, renters, or other occupants about the proper use of recycled water.
9. EID personnel have the right to visit your property, after giving you prior notice, to inspect your recycled water system and use. EID can also enter your property immediately if an emergency related to recycled water arises.

**I have read and I understand this homebuyer notification.
I agree to all requirements and conditions it contains.**
