

Clockwise from bottom left: 1) On the overlook platform, Dena explains how the water clarity is already much better now that the meadow is properly working to filter sediment from Hazel Creek before it gets to the lake.

2) Dena pauses on the boardwalk to explain how ladybugs use the meadow as a stop on their seasonal migration.

3) The boardwalk includes information points that describe aspects of the “functioning” meadow. The boardwalk also allows visitors to get up close to the meadow without harming it.

## Hazel Meadow—Model Restoration, Beautiful Recreation

Earlier this summer, when the wildflowers were thick and high, Hazel Meadow—located on the northeastern shore of Jenkinson Lake in Sly Park Recreation Area—was dedicated in a small ceremony attended by representatives from the California Department of Fish and Game and the Sierra Nevada Conservancy. These agencies provided funding for different components of the project.

Dena McCann, EID environmental review analyst and project manager throughout the restoration process, was on hand to give a guided tour of the meadow.

“It is important for Fish and Game and the Conservancy to be here and see the successful components of the project come together,” said McCann, after the tour had concluded. “This collaborative project is vital for the health of our water supply. It’s also a big value to the EID staff and many volunteers who made this place a reality.”

In October of 2008, volunteers that included Girl and Boy Scouts, their leaders and parents, EID employees, and consultants from Foothill Associates planted native grasses and other plants in the hard-packed soil of the meadow. Those plants took root, the boardwalk was built, and the meadow is functioning again.

“This is an amazing water quality project benefitting the people of El Dorado county and the Sierra Nevada,” said Sierra Nevada Conservancy representative Lynn Campbell. “We were proud to provide the funds for constructing the boardwalk that will help to ensure that this fragile meadow stays healthy for generations to come.”

“This is a win-win for EID and the county, as well as the volunteers and youth who participated,” said Lisa Wolfe-Kolb, staff counsel at Fish and Game. “It really is a poster project for EID and I hope it sets an example for similar projects going forward.”

And it’s an award-winning example as well. In 2009, the restoration project earned the California Environmental Protection Award from the state-wide California Rural Water Association.

## Why is a Healthy Meadow Important?

A fully functioning Hazel Meadow is a huge asset to the larger ecosystem at Jenkinson Lake. The meadow and the area around it provide a great spot for picnics and relaxation in a spectacular outdoor setting.

But it also serves another important purpose.

The meadow prevents flooding by slowing and spreading flood waters. And meadow plants and grasses naturally filter out sediment, trapping any pollutants that might otherwise flow from the nearby road and campground into the lake.

Jenkinson Lake is a major source of drinking water for EID customers, and a healthy, functioning meadow provides many long-term benefits for customers and outdoor enthusiasts alike.

So come out and enjoy this wonderful educational area. Remember to stay on the boardwalk (no bicycles or skateboards, please!) to help protect our water and the beautiful meadow for generations to come.
