

El Dorado Hills Water Treatment Plant Tours in August and September

The El Dorado Hills water treatment plant is one of five EID water treatment facilities

Water—everyone needs it. But where does your water come from?

The water EID treats and distributes to customers starts out as snowpack, high in the Sierra mountain range. As the snow melts, the water flows into various watersheds and into reservoirs like Jenkinson Lake and Folsom Lake. But before it gets to your tap, that water needs to be treated to strict state and federal standards.

Filtration and chlorination are just a couple of the steps needed to ensure that safe drinking water courses through the District's complex distribution system to homes and businesses in your neighborhood.

Want to learn more? Join us on a tour of EID's El Dorado Hills water treatment plant on one of the following Wednesdays: **August 10, August 24, September 14, and September 28**. Each tour lasts from 9:30 a.m. to 11:30 a.m. and there is no cost to attend. Send an e-mail to James Murphy at jmurphy@eid.org or call 530-642-4408 to reserve a place today. Each tour is limited to 25 participants (priority to District ratepayers).

Every community water system like EID is required by law to provide its customers with an annual water quality report. All EID customers will receive the report by mail. The report lists the regulated contaminants detected in treated water and the level at which they were found for the preceding calendar year. The water quality report is a great document to read before the tours begin!

The 2010 report includes a wealth of information and shows that once again your water meets or exceeds state and federal health standards. You can also download it from our document library at www.eid.org.
