This Addendum No. 1 ("Addendum") as dated above modifies certain Bidding Documents issued by the El Dorado Irrigation District ("District") in connection with the District’s EL DORADO HILLS WASTEWATER TREATMENT PLANT BIOSOLIDS REMOVAL PROJECT. All capitalized terms not otherwise defined herein shall have the meanings provided in the Bidding Documents. There are no other amendments to the Bidding Documents other than expressly contained in this and any other Addenda issued by the District.

1. Questions received (Q) with answers provided (A) by district are below:

   Q: Is this a prevailing wage project?
   A: No.

   Q: Is a bid bond required?
   A: No.

   Q: Are payment and performance bonds required?
   A: No.

   Q: I am interested in bidding on this project and I have a question regarding the insurance requirements in regards to the professional liability. I sent the RFP packet to my insurance company to review. They advised me that the professional liability was not a requirement for the last time this cleaning was done by us in 2013 and the cost for this insurance is well over $1,000.00. Can this be waived?
   A: Professional liability insurance is not required for this project.

   Q: Is there 480 volts 3 phase 100amp power service available within 50’ of setup area?
   A: Contractors will be limited to a 30amp service at the job site. Any additional power required to perform the job will need to be provided by the contractor via generator.

   Q: Is there 11/2” 60psi water service available within 50’ of setup area?
   A: Yes

   Q: When isolating the lagoons, who is responsible for decanting the water on top of sludge?
   A: The District will handle the decanting so we do not over load our system. The District will NOT pump sludge between the lagoons or out of them.

   Q: Who is responsible for temporary bypass?
   A: The District. No modification to our current plant process will take place without 48hr notice.
Q: Do both lagoons have a sump for complete drainage? What are the fittings that we have to hook up to in order to accomplish this?
A: Both have sumps, either a 4” or 6” cam and grove coupler.

Q: What are the working hours for this project?
A: 6:00am – 4:00pm. Overtime requests must be coordinated with site supervisor and approved 48hrs in advance.

Q: Do you have an engineers estimate for the cost of the project?
A: No formal engineers estimate exits for this project.

Q: Confirm that current estimate is 94 BDT to be removed from ponds?
A: Yes, 94 dry tons which would be roughly 640 wet tons if 15% solids can be achieved.

Q: Disposal must be land applied locally?
A: The biosolids application site must have and be in compliance with a Waste Discharge Permit issued by the local Regional Water Quality Control Board. The application site will be accepted after approval by the District’s Wastewater Plant Manager at the beginning of the contract.

Q: Can you tell us which company perform the last sediment removal project in 2013?
A: P&H Senesac

Q: How does the contractor awarded the job know how much biosolids to remove?
A: District staff estimated 96 dry tons of biosolids in the site waste ponds. The RFP is to CLEAN the site waste ponds. Any excess material shall be billed at the DRY ton price quoted by the contractor. Not-to-exceed value for the agreement will be 100 tons which includes contingency.

Q: When were the ponds last cleaned?
A: 2013

Q: What was the cost of the last removal? How many tons were removed?
A: 40.2 Dry tons were removed from the pond #2 only at a cost of $52,260. The digester and other emergency holding areas were cleaned as well but only the Pond cleaning cost is relevant to this RFB.

2. Mandatory site visit sign in sheet is attached as Exhibit 1 to this Addendum 1.

3. Exclusion zone map has been added to the scope for this project to limit contractor access. No equipment is allowed to access this area during performance of the work. Map showing the exclusion zone is attached as Exhibit 2 to this Addendum 1.
