Don’t Trash Your Drain

Don’t be fooled by the disappearance of products down the drain or toilet—they never just go away!

Companies are labeling products as “flushable” but these products clog sewer lines and damage pumps and other equipment. These problems are expensive to fix and can cause raw sewage overflows into homes, businesses, streets, and local waterways.

Use the trash can not the toilet or sink!

Protect your household plumbing—don’t flush anything that isn’t biodegradable. Be sure to use your trash can for other items, like the ones pictured above.
